## Snow

**Don't bother packing up your greenhouse every fall. Leave it up!**

The Snow Country Greenhouse is designed to support snow on the roof. Special wood supports, called girts, stop snow from pushing in the side panels.

## Wind

**No mater how hard you huff and puff it just won't fall down!**

With your greenhouse secured to the foundation correctly it won't budge. The unique Dutch door can be opened one panel at a time to

control ventilation.

The windows are set on slides so they are easily adjust and won't blow off in the wind.

# MATERIALS

We have chosen the highest quality materials to create a durable, long lasting greenhouse

## Western Cedar

- Rot resistant
- Strong
- No need to be sealed
- Renewable

## Polycarbonate

- 8 MM ( $\frac{5}{16}$ " ) Thick
- High R-Value
- 10 year warranty for light transition

# SIZES

We offer many different sizes. Pick the one that works best for you.

8'x8'

8'x12'

12'x12'

12'x16'

# ASSEMBLY

As easy as 1,2,3!

Snow Country Greenhouse's are quick to set up with help from friends in just a few hours. Start with your foundation, assemble the prefabricated modular panels and then add the trim. \*

You're all done!

## 1 Foundation

The *foundation provided by you must be square, level and anchored* to ground to prevent wind lift. You can use a variety of materials for the foundation such as treated wood or concrete. The foundation is not part of the kit and should be assembled before the greenhouse can be erected.

## 2 Modular Panels

Lay out the prefabricated panels that come with your kit. They will be marked with removable markers to ensure easy assembly. All screws, nuts and bolts will come with your package.

## 3 Trim

The trim is fitted on the edges and between the panels to cover the seams in the panels.

\*Professional assembly available at additional cost
